EXTRA SPECIAL FOR THE SMALLER GROWER --- TWO FLASK PACKETS

These Two Flask Packets were designed for the smaller grower who does not want too many seedlings of any one cross AND, as a special inducement for those who have never tried flasking Orchid seed. Simplified instructions will be included on request.

Any intelligent person who will follow these simplified instructions properly, should flask seed successfully and enjoy the thrill of raising Orchids from seed.

There is sufficient seed in each Two Flask Packet for two 500 cc flasks. Each cross is packaged separately and correctly labelled. You can have your choice of any seed on my list at the following prices:

One packet	\$5.00	Four packets	15.00
Two packets	9.00	Five "	16.25
Three "	12.00	Six, or more packets at 3.00 ea. packet.	

OR, one two-flask packet of each of the entire fifteen crosses for forty dollars.

The discounts and bonuses do not apply to two-flask offers. These prices are net.

5. The following information was obtained from the records of the Bureau of Land Management, Department of the Interior, for the years 1940 through 1949:

Each cross is made up of two 500 cc flasks. Each flask contains 250 cc of water and 250 cc of seed. The seed is not germinated, but is simply washed and then placed in the flask. The water is changed daily and the seed is changed every 2 weeks. The seed is then dried and stored for future use.

|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|------------|
| # 500 | <u>C. trianae</u> X <u>Lc. Chas. Futterman</u> | \$15.00 |
| <p>The <u>C. trianae</u> seed parent was an exceptionally fine specimen. With wide sepals and fine bold form, it could easily pass as a hybrid. Extra large and dark, it bloomed in January. Pollen parent, <u>Lc. Chas. Futterman</u>, carried a nine inch bloom. Very dark, intense color, good form and substance. Petals three inches wide. Both S & P unusually wide for an Lc. Bloomed in January.</p> | | |
| # 502 | <u>C. Aurantiaca</u> X <u>C. Aurantiaca</u> (entirely different strains) | 5.00 |
| <p>Three inch flowers in clusters. Clear orange-red. Very early Spring bloom. Commercial value as an extra nice pot plant for Easter. Easily raised; a strong, rapid grower. Fine for those flasking their first seed.</p> | | |
| # 506 | <u>C. Labiata</u> X <u>C. Maggie Raphael</u> x <u>C. King George</u> | 15.00 |
| <p>The seed parent was a fine, large, delicate colored <u>Labiata</u>. Pollen parent, an "unnamed" cross of <u>C. Maggie Raphael</u> & <u>C. King George</u>, carried a nine inch bloom of excellent form and heavy substance. Orchid colored S & P; grand crimson-magenta lip; golden-veined throat. Both of its parents were carefully selected as follows:
<u>C. Maggie Raphael</u>, lilac, with large, dark lip; golden-veined throat.
<u>C. King George</u>, Nankeen yellow S & P; crimson-magenta, golden veined lip.</p> | | |
| # 507 | <u>Cyrtopodium punctatum</u> X <u>Cyrtopodium punctatum</u> . | 5.00 |
| <p>Has hornlike pseudobulbs often a foot long. Each long, branching flower spike carried over 100 greenish-yellow $1\frac{1}{2}$ inch blooms, marked reddish-brown. Early Spring bloom. Easily and rapidly grown, blooming much sooner than Cattleyas.</p> | | |
| # 515 | <u>C. Trimos</u> , Standard cross of <u>C. Mossiae</u> & <u>C. trianae</u> | 12.50 |
| <p><u>C. Trimos</u> is an excellent free flowering commercial orchid with wide blooming season, Christmas to Mother's day. A thoroughly dependable bloom. <u>C. Mossiae</u>, seed parent, unusually large, dark lavender; good form & texture. The big, showy blooms from this plant always bring hybrid prices. <u>C. trianae</u>, pollen parent, was a very dark, late Spring bloom.</p> | | |
| # 516 | <u>C. Bowringiana</u> X <u>C. Crispa</u> | 10.00 |
| <p>Seed parent, a grand, vigorous <u>C. Bowringiana</u>, with striking spike of 28 intense $2\frac{1}{2}$ inch blooms, carried two more similar spikes at the same time it held this seed pod. The vivid, almost purple S & P and intense, glowing purple lip and bright yellow throat, made a show of color that had little competition among early Fall bloomers. This extra strong parent almost always passes along its nearly 98% viability to its offspring. Pollen parent, <u>L. Crispa</u>, carried eight medium sized blooms. Pure milk white S & P, heavy substance, deep purple lip; contrasting white edging. Late summer.</p> | | |
| # 517 | <u>C. Bowringiana</u> X <u>C. trianae Alba</u> | 10.00 |
| <p>Same seed parent as above. In fact, same plant, as the pod was carried on an out-of-season spike which bloomed in January. <u>C. trianae Alba</u>, pollen parent, a large, well-held bloom; excellent form and substance. Pure, waxy white S&P; very dark, intense, deep purple lip. January. (I know that Bowringiana crosses produce excellent results. My <u>C. Bowringiana</u> x <u>C. Speciosissima</u> averages six five-inch, well-held blooms on a spike; vivid lavender, with purple border on lip; bright yellow in throat. Commercial demand for these lovely clusters of blooms is increasing.)</p> | | |
| # 518 | <u>C. trianae var Edgar Knight</u> X <u>C. trianae fine var.</u> | 7.50 |
| <p><u>C. trianae var Edgar Knight</u>, seed parent, was a compact bloom with intense purple lip. Petals dark orchid with purple feathering in center of each petal. <u>C. trianae, fine var</u>, pollen parent, a seven inch well-shaped bloom with intense purple lip, bright yellow throat. Winter blooms.</p> | | |

The following packets of hybrid ORCHID SEED, microscopically examined and thoroughly tested for viability, are ready to ship for.

per packet
\$2.50

C. trianae X la. Chae, Fosterman

Cross
500

The C. trianae seed parent was an exceptionally fine specimen, 1 1/2" wide sepals and fine bold form, it could easily pass as a hybrid. Extra large and dark, it bloomed in January. Pollen parent, la. Chae, Fosterman, carried a nine inch bloom. Very dark intense color, good form and substance. Petals three inches wide. Both S & P unusually wide for an la. bloomed in January.

C. aurantiaca X C. aurantiaca (centrifally different strains)

502

Three inch flowers in clusters. Great orange-red. Very early spring bloom. Commercial value as an extra nice pot plant for Easter. Easily raised & strong, rapid grower. Fine for those finishing their first seed.

C. labiate X C. Marie Raphael & C. King George

503

The seed parent was a fine, large, delicate colored labiate. Pollen parent, an "unnamed" cross of C. Marie Raphael & C. King George, carried a nine inch bloom of excellent form and heavy substance. Orchid colored S & P; grand crimson-tinged lip; golden-veined throat. Both of its parents were carefully selected as follows:
C. Marie Raphael, lilac, with large, dark lip; golden-veined throat.
C. King George, lavender yellow S & P; crimson-tinged, golden veined lip.

Cyrtopodium punctatum X Cyrtopodium punctatum

507

Has horizontal pseudobulbs, often a foot long. Each long, branching flower spike carried over 100 greenish-yellow 1 1/2 inch blooms, marked reddish-brown. Early spring bloom. Easily and rapidly grown, blooming much sooner than Cattleyas.

C. Trimes, Standard cross of C. Mossiae & C. trianae

512

C. trianae is an excellent free flowering commercial orchid with wide blooming season, Christmas to Mother's day. A thoroughly dependable bloom. C. Mossiae, seed parent, unusually large, dark lavender; good form & texture. The big, showy bloom from this plant always bring hybrid prices. C. trianae, pollen parent, was a very dark, late spring bloom.

C. Bowringiana X C. Grisea

515

Seed parent, a grand, vigorous C. Bowringiana, with striking spikes of 22 intense 2 1/2 inch blooms, opened two more similar spikes at the same time. It held this seed pod. The vivid, almost purple S & P and intense, glowing purple lip and bright yellow throat, made a show of color that had little competition among early fall bloomers. This extra strong parent almost always passes along its nearly 98% viability to its offspring. Pollen parent, la. Grisea, carried eight medium sized blooms. Pure milk white S & P, heavy substance, deep purple lip; contrasting white edging. Late summer.

C. Bowringiana X C. trianae Alba

517

Same seed parent as above. In fact, same plant, as the pod was carried on an out-of-season spike which bloomed in January. C. trianae Alba, pollen parent, a large, well-held bloom; excellent form and substance. Fine, waxy white S & P; very dark, intense, deep purple lip. January. (I know that Bowringiana crosses produce excellent results. My C. Bowringiana x C. Spectabilis averages six five-inch, well-held blooms on a spike; vivid lavender, with purple border on lip; bright yellow in throat. Commercial demand for these lovely clusters of blooms is increasing.)

C. trianae var Edgar Knight X C. trianae fine var.

518

C. trianae var Edgar Knight, seed parent, was a compact bloom with intense purple lip, faint dark orchid with purple feathering in center of each petal. C. trianae, fine var. pollen parent, a seven inch well-shaped bloom with intense purple lip, bright yellow throat. Winter bloom.

- Cross
519 L. tenebrosa X C. Crimar Per packet \$12.50
- L. tenebrosa seed parent had unusually large, nicely formed, dark, coppery colored S & P; dark red throat and lip. May.
C. Crimar, pollen parent, was an eight-inch, beautifully formed, heavy textured, dark fuschia-red self. Exceptionally vivid; golden throat.
- # 521 C. trianae X C. Remy Chollet 15.00
- The trianae seed parent was a large, compact bloom with blush-colored S & P; deep purple lip and yellow throat. Late January bloom.
C. Remy Chollet pollen parent was an eight-inch dark orchid-colored bloom with deep purple, frilled lip bordered with light orchid. Heavy-textured excellent form. C. Remy Chollet has definitely proven its ability as a STUD plant. This cross should produce extra fine Winter blooming orchids. The pod, one of the largest I have ever seen, was on the trianae nearly a full year.
- # 522 Bc Hartland X C. trianae, fine variety 12.50
- The seed parent, Bc Hartland, was a large, well-formed bloom of excellent shape, heavy texture; dark orchid with lovely fringed lip and golden throat. Bloomed in December. Pollen parent, C. trianae, fine variety, was extra large with medium orchid-colored S & P, deep, vivid purple lip. Golden yellow throat. December.
- # 523 C. trianae X Lc Jane Dane 10.00
- The C. Trianae seed parent was a very light-almost white - six-inch bloom. Winter. Pollen parent, Lc Jane Dane, was a fine, large, 7-inch white bloom with vivid, dark purple lip. Winter.
- # 524 Lc Altesse X C. Souvenir Louis Sander 15.00
- Lc Altesse, seed parent, a cross of Lc Britain & C. Remy Chollet, was a large, very dark Spring bloom of excellent form and substance.
C. Souvenir, Louis Sander, pollen parent, was a huge, pure white bloom, well held and very showy. A spring bloom, but the plant is so productive that it usually blooms more than once a year, often in Winter. Both parents have such excellent blood lines - producing some of the finest of show blooms that the cross should produce outstanding orchids, ranging from lovely whites to very dark blooms.
- # 525 C. trianae X C. trianae, var. Atala 7.50
- Two very dark, six to seven inch blooms. The C. trianae, var. Atala was an especially fine species, with broad, rounded petals and vivid, almost crimson, ruffled lip. Winter.
- # 526 C. trianae, Papuan var. X C. trianae alba 7.50
- The seed parent was imported from Papua, New Guinea, and was so fine and showy that it could easily have been a natural hybrid instead of the species that it was labelled. A very light, almost white, seven inch bloom of excellent shape and texture, with a bright magenta half-moon across the lower half of the ruffled lip and yellow spots high in the throat, divided by a fan of deep purple markings. December bloom.
Pollen parent, C. trianae alba, was a six-inch January bloom, with crisp, snowy white petals and sepals and crimson lip with light lavender edging. January. The seed from this cross has tested 90% viable and should produce some very fine, showy, light colored Winter blooms.

Each regular-size packet contains sufficient seed for ten, or more, 500 cc flasks. Your order, subject only to prior sale, will be AIR MAILED - registered - the day it is received.

While I can make no guarantee, either express or implied, I have used every precaution to offer only viable seed from carefully selected parentage. Obviously, once the seed has left my care, I cannot assume responsibility for its handling.

Per packet
\$12.50

C. tritaneus X C. tritaneus

Grass
519

1. The seed parent was a large, compact bloom with black-colored
oppositely lobed 2 & 4 P. dark red throat and lip. May.
C. tritaneus, pollen parent, was an eight-lobed, heavily
textured, dark lobed-veined leaf. Exceptionally vivid; golden throat.

12.00

C. tritaneus X C. tritaneus

521

The tritaneus seed parent was a large, compact bloom with black-colored
2 & 4 P. deep purple lip and yellow throat. Late January bloom.
C. tritaneus pollen parent was an eight-lobed dark arch-shaped bloom
with deep purple, ruffled lip bordered with light white, heavily-textured
excellent form. C. tritaneus has definitely proven its ability as a STUP
plant. This cross should produce extra fine Winter blooming orchids. The seed
one of the largest I have ever seen, was on the balance nearly a full year.

12.50

C. tritaneus X C. tritaneus, fine variety

522

The seed parent, C. tritaneus, was a large, well-formed bloom of excellent
shape, heavy texture; dark orchid with lovely fringed lip and golden throat.
Bloomed in December. Pollen parent, C. tritaneus, fine variety, was extra
large with medium orchid-colored 2 & 4 P. deep, vivid purple lip. Golden
yellow throat. December.

10.00

C. tritaneus X C. tritaneus

523

The C. tritaneus seed parent was a very light-colored white - six-inch bloom.
Winter. Pollen parent, C. tritaneus, was a fine, large, 7-inch white bloom
with vivid, dark purple lip. Winter.

12.00

C. tritaneus X C. tritaneus

524

C. tritaneus, seed parent, a cross of C. tritaneus & C. tritaneus, was a large,
very dark Spring bloom of excellent form and substance.
C. tritaneus, pollen parent, was a large, pure-white bloom, well
held and very showy. A spring bloom, but the plant is as productive that it
usually blooms more than once a year, often in winter. Both parents have
excellent blood lines - producing some of the finest of show blooms that
the cross should produce outstanding orchids, ranging from lovely white to
very dark bloom.

7.50

C. tritaneus X C. tritaneus, var. Atala

525

Two very dark, six to seven inch blooms. The C. tritaneus, var. Atala was an
especially fine species, with broad, rounded petals and vivid, almost
crimson, ruffled lip. Winter.

7.50

C. tritaneus, French var. X C. tritaneus alba

526

The seed parent was imported from Japan, New Guinea, and was as fine and
showy that it could easily have been a natural hybrid instead of the species
that it was labelled. A very light, almost white, seven inch bloom of
excellent shape and texture, with a light magenta half-moon across the
lower half of the ruffled lip and yellow spots high in the throat, divided
by a fan of deep purple markings. Late winter bloom.
Pollen parent, C. tritaneus, was a compact, January bloom, with crisp, heavy
white petals and ruffled lip with light lavender edging. January.
The seed from this cross has tested 50% viable and should produce some very
fine, showy, light colored Winter blooms.

Each registered packet contains sufficient seed for ten, or more, 500 cc flasks.
You order, subject only to prior sale, will be ALL MAILED - registered - the day it
is received.
While I can make no guarantee, other experts or myself, I have used every precaution
to offer only viable seed from carefully selected parents. Obviously, once the seed
has left my care, I cannot assume responsibility for its handling.
